# UN EQUIPO DE 60 INVESTIGADORES ALEMANES REVELA QUE DENTRO DE LAS VACUNAS DE LA COVID-19 HAY CESIO, BARIO, CROMO, TITANIO, COBALTO, ALUMINIO, HIERRO...

Santiago Angel Garcia

🕒 3 septiembre 2022

PORTADA

Se ha pedido aquí en España y en todo el mundo, a las autoridades sanitarias y a la Justicia, que se revele la composición de las llamadas vacunas contra la COVID 19. En determinados foros políticos y económicos, como la OMC, se ha pedido que se revelen las patentes. Y siempre se ha obtenido como respuesta el silencio o un no. Mientras tanto, numerosos profesionales, de manera aislada y en diferentes partes del mundo, han afirmado haber hallado grafeno. Y ahora este grupo de investigadores alemanes – al frente Helena Krenn -, asegura que han encontrado antimonio en todos los viales de las diferentes marcas analizadas, y según en qué viales, metales también como cesio, bario, cromo, titanio, cobalto, aluminio, hierro...

Junto a Helena Krenn, una de nuestras fuentes, la página Extramurosrevista.com, cita también al ingeniero Holger Reißner y al patólogo Arne Burckhardt, pero el grupo de trabajo consta de 60 miembros, «incluidos médicos, físicos, químicos, microbiólogos y profesionales de la salud alternativa, con el apoyo de abogados y psicólogos». La mayoría, al parecer, ha decidido ocultar su nombre por temor a represalias de las autoridades alemanas.

Por otra parte, en este informe, que estos investigadores califican de preliminar, «El Grupo de Trabajo para el Análisis de la Vacuna COVID -según estas mismas fuentes -, utiliza modernas técnicas de medición médica y física, cuyos resultados se han confirmado y complementado: Microscopía Electrónica de Barrido (SEM), Espectroscopía de Energía Dispersiva de Rayos X (EDX), Espectroscopía de Masas (MS), Análisis de Plasma Acoplado Inductivamente (ICP), Microscopía de Campo Brillante (BFM), Microscopía de Campo Oscuro (DFM) y Diagnóstico por Imagen de Sangre Viva, así como el análisis de imágenes mediante Inteligencia Artificial».

¿Estamos en el buen camino? ¿Sabremos de una vez qué contienen estos fármacos experimentales? No olvidemos que los estudios favorables al grafeno siguen ahí. Nosotros no somos nadie, científicamente hablando, para anularlos. Y recuérdese que la ley obliga a explicar lo que van a inocularle a las personas y que estas, tras conocer su contenido, deben dar su consentimiento, un acto, un gesto, una norma que se definiría como «consentimiento informado». Así que si se llegara a encontrar y admitir por toda la comunidad médica y científica qué hay realmente en los viales, si es tóxico habrá que responsabilizar a numerosas personas de lo sucedido estos dos últimos años. Hay, recuérdese también, un aumento significativo de fallecimientos y de personas con efectos secundarios que podrían ser resultado de vacunas tóxicas. Cabe la posibilidad también de que lo habido en la vacunas es lo esperado e informado por las empresas farmacéuticas que son sus propietarias. Pero esta es una remota posibilidad dado lo que se está viendo por unos y otros investigadores en estos fármacos, calificados como experimentales.

23.08. What's in the vaccines. New revelations.

## NOTA.

Hubo diversos problemas técnicos con el sonido durante la grabación de esta entrevista. Pedimos disculpas. Hemos preferido que nuestros invitados, Esteban Cabal y Javier España, siguieran la charla antes que detener la grabación. Gracias a ellos por haber seguido informándonos de este vital asunto. Y al público también agradecerle su paciencia.

# Unusual Toxic Components Found in COVID Vaccines, 'Without Exception': German Scientists

A group of independent German scientists found toxic components—mostly metallic—in all the COVID vaccine samples they analyzed, “without exception” using modern medical and physical measuring techniques.

The Working Group for COVID Vaccine Analysis says that some of the toxic elements found inside the AstraZeneca, Pfizer, and Moderna vaccine vials were not listed in the ingredient lists from the manufacturers.

The following metallic elements were found in the vaccines:

- Alkali metals: caesium (Cs), potassium (K)
- Alkaline earth metals: calcium (Ca), barium (Ba)
- transition metals: cobalt (Co), iron (Fe), chromium (Cr), titanium (Ti)
- Rare earth metals: cerium (Ce), gadolinium (Gd)
- Mining group/metal: aluminum (Al)
- Carbon group: silicon (Si) (partly support material/slide)
- Oxygen group: sulphur (S)

These substances, furthermore, “are visible under the dark-field microscope as distinctive and complex structures of different sizes, can only partially be explained as a result of crystallization or decomposition processes, [and] cannot be explained as contamination from the manufacturing process,” the researchers found.

They declared [the findings](#) as preliminary.

The findings “build on the work of other researchers in the international community who have described similar findings, such as Dr. Young, Dr. Nagase, Dr. Botha, Dr. Flemming, Dr, Robert Wakeling, and Dr. Noak,” Dr. Janci Lindsay, Ph.D., a toxicologist not involved in the study, told The Epoch Times.

“The number and consistency of the allegations of contamination alone, coupled with the eerie silence from global safety and regulatory bodies, is troublesome and perplexing in terms of ‘transparency’ and continued allegations by these bodies that the genetic vaccines are ‘safe,’” Lindsay added.

Comparison of crystals in the blood and in the vaccine; on the left, crystalline formations are found in the blood of test subjects vaccinated with Comirnaty (BioNTech/Pfizer), the images on the right show that these types of crystals are also found in Comirnaty vaccines. (Courtesy of Helen Krenn)

Helena Krenn, the group’s founder, submitted the findings to German government authorities for review.

“We had submitted it to the participants of the government and further addresses from newspapers with the platform open-debate.eu, only in Germany, Austria, and Suisse,” Krenn told The Epoch Times.

Two other important findings were that blood samples from the vaccinated had “marked changes” and that more side effects were observed in proportion to “the stability of the envelope of lipid nanoparticles.”

A lipid nanoparticle is an extremely small particle, a fat-soluble membrane that is the cargo of the messenger RNA (mRNA).

## **Methodology**

“Using a small sample of live blood analyses from both vaccinated and unvaccinated individuals, we have determined that artificial intelligence (AI) can distinguish with 100% reliability between the blood of the vaccinated and the unvaccinated. This indicates that the COVID-19 vaccines can effect long-term changes in the composition of the blood of the person vaccinated without that person being aware of these changes,” the study states.

The findings of acute and chronic physiological changes to the blood of those inoculated with the vaccines, consistently discerned via AI software, “also echoes the findings of many other researchers and support the contentions of contamination and/or adulteration,” Lindsay said.

“We have established that the COVID-19 vaccines consistently contain, in addition to contaminants, substances the purpose of which we are unable to determine,” their study says.

The group consists of 60 members, including physicians, physicists, chemists, microbiologists, and alternative health practitioners, supported by lawyers and psychologists.

They said that critics of the mRNA COVID-19 vaccines “have been publicly defamed, ostracised and economically ruined,” and as such, “contrary to the customary practice in science, we have decided to protect ourselves by remaining anonymous as authors of this report.”

Anomalous objects in Johnson & Johnson's Janssen vector vaccine. It should be noted that objects of this

type were not found in all of the samples. (Courtesy of Helen Krenn)

The scientists claim that their results have been cross-confirmed using the following measuring techniques: "Scanning Electron Microscopy (SEM), Energy Dispersive X-ray Spectroscopy (EDX), Mass Spectroscopy (MS), Inductively Coupled Plasma Analysis (ICP), Bright Field Microscopy (BFM), Dark Field Microscopy (DFM) and Live Blood Image Diagnostics, as well as analysis of images using Artificial Intelligence."

The analysts explain that they have been cooperating with other groups in different countries that have been executing similar investigations and have obtained results consistent with their own.

"The results from our analysis of the vaccines can, consequently, be regarded as cross-validated," the summary report of their findings states.

"It should be acknowledged of course that [German Working Group's] work is described as 'Preliminary Findings,' not yet published in a peer-reviewed journal and that chain of custody as well as the identity of many of these

scientists is unknown. However, in this heavily charged and censored climate when it comes to any challenges to the 'safety and efficacy' of the genetic vaccines, I myself can attest to the difficulties in conducting the basic research, much less publishing that same research in a peer-reviewed journal, in order to get at these questions as well as disseminate the findings," Lindsay said.

The Comirnaty vaccine from BioNTech/Pfizer exhibits a diversity and large

number of unusual objects.

The vast number of crystalline platelets and shapes can hardly be interpreted as impurities. They appear regularly and in large numbers in all samples. (Courtesy of Helen Krenn)

Astra Zeneca, Moderna, Pfizer, and J&J did not respond to a request for comment.
